Customized solutions

Given that the construction industry is constantly evolving, our customers' operations always demand new technologies and services to back the performance and control of their equipment. To meet these requirements, we have created 5 levels of services for Komatsu equipment, in order to provide the necessary support to reduce costs and maximize productivity, according to each business characteristics.

Specialized support

Each level of service has been designed to meet the customer's different operational needs. With proper maintenance service and specialized advice, your equipment will always be in optimal conditions, thus extending its life.

Among the different levels' main benefits, the following stand out:

- Supply of genuine filters and Certificated oils for maintenance.
- Preventive and corrective maintenance service, performed by highly qualified staff.
- Maintenance activities management, with a remote supervision plan and operation service programming using Komtrax satellite monitoring system.
- Optional extended warranty for main components, which allows you to project the operating costs and ensure the best resale value for your equipment.

Connected to operation

Service contracts give access to Komtrax*, a revolutionary satellite monitoring system for Komatsu equipment, which provides relevant information to allow our customers to manage their fleet anytime, anywhere.

Thanks to this system, the entire equipment maintenance planning can be optimized, which, in turn, increases performance.

*For equipment with Komtrax system installed only.

5
